Table198. Squares+n24=next MPS INCLUDED: Only ODDs NOT ÷3 are in Col 1. They are the same ODDs found in the Active Rows on the BIM. The “ones” value follows a 10-# pattern: 1-3-7-9-3-5-9-1-5-7 starting with 11. The paired numbers equi-distant from the center always Σ=8. This group contains ALL the Primes (except 2), but not all members are Prime. EXCLUDED: Only ODDs ÷3. They are the same ODDs found in the NON-Active Row on the BIM. The “ones” value follows a 10-# pattern: 1-7-3-9-5-1-7-3-9-5 starting with 21. The paired numbers equi-distant from the center always Σ=6. There are NO Primes in this group. The two groups, INCLUDED (shown) and EXCLUDED, both generate n24 relationships with their squares, but only and exclusively, within their respective group — there is no crossover relationship between groups. The n24 values in the EXCLUDED group show the n=Δ3, e.i. 6-9-12... Whereas, the n24 values in the INCLUDED group show two alternating patterns where n=Δ1 and n=Δ2, e.i. 2-5-3-7-4-9...
