

Running Differences of (Sqr Axis #s - sequential PD#s) forms the BIM. A large grid of numbers with various annotations and formulas. Annotations include: 'Example: 3^3 = 27 = 15 + 12', 'Ax^3 = nAx + xAx', '3Ax^3 = 27 = nAx + xAx', '27 = 8*3 + 1*3', '27 = 5*3 + 4*3', '27 = 0*3 + 9*3', '1 STEP + 2 STEPS = 3 STEPS', '2 STEPS + 1 STEP = 3 STEPS', and 'Copyright © 2020, Reginald Brooks, Brooks Design. To grow PD Col, select and expand to the bottom and then fill left column by autofill. PD column will auto fill from this. SPD # = C-232 is formula for expanding Columns; drag across to autofill formula on grid. Drag down to autofill remaining cells below. Here the resulting PD#s are: Replace these with the actual PD values from Col. C. One can make a 200x200 BIM, by adding columns out to x^2 - 40000, i.e., Axis Column 200, Axis Column 200.
