Table 48:
Example

The core Axis value = EVEN / 2. The “steps” are the distance along the Axis from either side of the core Axis value. These steps point to the symmetrical location of the PRIMES within the PPsets for the EVEN 8872, e.i. 5 steps on either side of 4436 are PRIMES that are, together, part of the PPset that forms the EVEN 8872.
