

Dividing PN by 2 until ODD is reached gives x,y z, AND, the Rectangles  $3 \cdot 4 \rightarrow 7 = z = Mp$ ,  $14 \cdot 14 \rightarrow 196$  (Square) =  $4MPS$ , and  $10 \cdot 18 \rightarrow 224 = 8PN$ . RED

Locate  $PN=28$  on BIM Axis, where it will cross the PD at  $14^2$  or  $PN/2$ . Sequential division of the PN down to its first ODD  $7=z$ .  $(z+1)/2=x=4$ .  $y=x-1=(z-1)/2=3$ . The Axial span that = x is 12 and 16, that sum to 28. The  $12=xy=CR$  and the  $16=x^2=PNS$ .  $8PN=224$  @Row18 by Col10.  $4MPS=196$  @ Row14 by Col14. Row4 by Col3 =  $7 = x =$  Mersenne Prime.
